additional insights about
NFORS and other fire
fighter specific projects.

Project Partners

NFORS was created by fire
service research partners,
including the International
Association of Fire Chiefs, the
Metropolitan Fire Chiefs Association,
the International Association of Fire
Fighters, Underwriters Laboratory
(UL), the National Institute of
Standards and Technology, the
Urban Institute, the University of
Texas at Austin, and the Center for
Public Safety Excellence.

NFORS Exposure Tracking Has Gone Mobile!

The new National Fire Operations Reporting System (NFORS) exposure tracking module is now available as an app from the Google Play store and the Apple App store. With the mobile app, any fire fighter, paramedic or officer can access and use the exposure tracker which serves as a personal database providing a detailed history of work and exposures in a private, encrypted and secure online environment.

Benefits of the mobile Exposure Tracker:

- Documents both physical and behavioral health exposures throughout your career
- Document exposures on-the-go from anywhere
- Your data stays with you even into retirement
- Track all of your incidents throughout your career with live NFORS CAD integrations in your department
- Be part of National Firefighter Cancer studies by opting-in to share your exposure data with researchers

How to Get Started

Download the app and complete your NFORS individual profile. This profile will be yours alone. The data you enter will be encrypted and secure. The department will not have access to your data. If your department participates in NFORS CAD, the department will receive periodic aggregate reports about overall exposure trends — not individual reports.

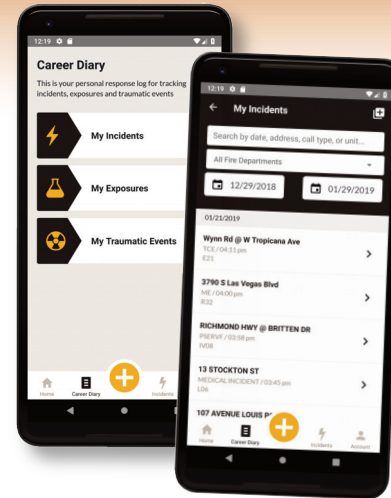

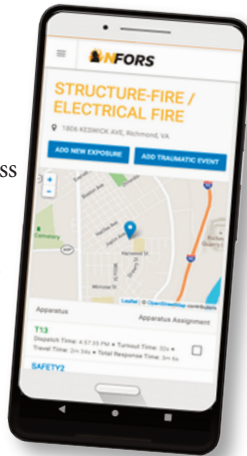

Upon the completion of your profile, you will be assigned a unique NFORS ID Code Number that will remain your NFORS ID for life. You will keep your NFORS account and all your data even if you leave the department or retire

Department Participation

Encourage your department to participate in this nationwide program to ensure that you have information about your on-the-job exposures readily available should you ever need it and as part of the ongoing fire fighter cancer surveillance research to stop the proliferation of this deadly disease in our ranks. By linking your department to NFORS, your incident data will automatically load directly into your personal exposure record.

“NFORS is also a personal database providing a detailed history of your work and exposures in a private, encrypted, secure online environment, all available on a mobile device. The NFORS Exposure App becomes a fire fighter career diary to ensure evidence of career exposures, should physical or behavioral health issues arise long-term or even in retirement.”

Otto Drozd, Fire Chief
Metropolitan Fire Chiefs President

Download the Mobile App

Visit the Apple App store or Google Play and search “NFORS”. Download the app to your personal phone and complete your profile. It’s that simple! Then use the app to document exposures after each response or training exercise. Encourage your fire department to get on board with NFORS CAD. Get a demo at i-psdi.org/nfors.html.

About Us

The International Public Safety Data Institute procures, assembles, analyzes and reports information from fire, rescue and law enforcement data. IPSDI provides live dashboards for local public safety agencies to provide usable information about their operations.

“More and more governments are stepping up to the plate to enact laws that protect our members who get cancer by allowing them to apply for workers’ compensation so they can get the treatment they need to return to work protecting their communities. The NFORS Personal Exposure App will help provide our members with the evidence they need to show on-the-job exposure to a toxic soup of carcinogens.”

Harold A. Schaitberger
General President, International Association of Fire Fighters

Our Products

Go to the app store and search for NFORS Exposure App. The app works on iOS and Android.
